Pizza series

Origin of pizza

3rd century BC, Roman history: Round wheat cake with olive oil, spices and baked on stone Some people believe that pizza originated in China: Marco Polo, the famous Italian traveler, enjoyed a kind of pancake with scallion oil which was popular in the north when he was traveling in China.When he returned to Italy he always wanted to taste it again, but he couldn't bake it.One Sunday, while he was having a party with friends at his home, Marco Polo called one of the chefs from Naples to him and described the traditional Chinese chives pie in northern China.The cook made the food in the manner described by Marco Polo.But I was busy for along time, but I still couldn't put the filling into the dough. Marco Polo suggested eating the filling on top of a pie.When the chef returned to Naples, he made this recipe with local cheeses and sauces. It was so popular that the word "pizza" spread.

"Der fuzz" : ein römischer bericht aus dem 3. Jahrhundert v. u. Z. : weizenmehl mit olivenöl sowie gewürz und SteinManche glauben, die pizza kommt aus china: der berühmte italienische reisende marco polo isst bei seinen reisen nach china am liebsten eine beliebte zwiebeltorte aus dem Norden.Nach italien wollte eres ständig probieren, aber es wollte nicht backen.Eines sonntags kam er zu hause zu freunden, und marco polo rief einen koch aus neapel an und Malte ihn als zwiefarbenen pasteten aus dem Norden chinas auf. Der koch machte es so, wie Markus polo es dargestellt hatte.Nach einem halben tag konnten sie die füllung nicht in den teig legen.Marco polo schlug vor, die füllung in den kuchen zu packen. Nach seiner rückkehr in neapel experimentierte der koch mit dem mozzarella, der dort salami zubereitet hatte, und seither sprach man Von pizza.

Origin of Fried Food

+ It is said that "Flint Renshi" invented the drill wood fire, the end of the human "RuMao drink Bai blood" of the original life, from now on, food and fire began to have contact, which not only brought civilization to mankind, but also provided the conditions for the origin of cooking technology.The improvement of diet, not only conducive to human health, but also improve the human "taste", people have been uneasy at "boiled", but also keen on "fried", from the home-grown fried pancake, fried yuanxiao to imported "foreign" food, such as French fries, etc., and so on.Fried food not only has bright color and lustre, but also has the paste fragrance that water does not have, crispy and delicious, make a person droop, appetite increases.Whenever weddings and funerals, red and white, put fried food, it will be more colorful.

+ This process was the first known to have involved fire and ended the primitive life of man while food came into contact with fire. The change in diet has not only brought good things for our health, but has also increased human taste. People feel uncomfortable when cooking and are therefore more accustomed to deep-frying than to fried pretzels, fries and imported "world dishes" such as French fries. Fried foods are not only brightly colored, but also watery, shiny and delicious. And it seems to work well at a marriage or a celebration that brings good fried food.

Origin of muffins
The origin of muffins is said to be related to the British, according to the custom of Christians, light food should be eaten 40 days before Easter, , flour and sugar to make muffins, which have been passed down to the present and have become a favorite afternoon tea snack for many people. And this seemingly simple muffin actually has a secret to its delicious taste. According to the industry, the thickness of the muffin is the key to affecting the taste. Usually, the thickness of one centimeter is the most moderate taste of the muffin.
Der Ursprung der Muffins soll mit den Briten zusammenhängen: Nach dem Brauch der Christen sollte 40 Tage vor Ostern leichte Kost verzehrt werden, Mehl und Zucker zu Muffins, die bis in die Gegenwart überliefert und zu einem geworden sind Lieblings-Nachmittagstee-Snack für viele Menschen. Und dieser scheinbar einfache Muffin hat tatsächlich ein Geheimnis für seinen köstlichen Geschmack. Laut Industrie ist die Dicke des Muffins der Schlüssel zur Beeinflussung des Geschmacks. Normalerweise ist die Dicke von einem Zentimeter der mäßigste Geschmack des Muffins.
